

Summer Bites!

Warm weather brings the best out in all of us, but it also brings out plenty of pesky parasites as well! Make sure your pets have a parasite free summer by keeping their anti-parasite treatments up to date.

 **Fleas** are thriving right now, especially on wildlife. If your cat is a hunter or your dog enjoys chasing rabbits, they are sure to come into contact with them. Don't forget fleas are champion jumpers, so will have no problems getting on your pets!

Harvest mites are very itchy and often congregate between toes. They can be spotted if you look carefully. They are small, but bright orange! If your dog or cat is chewing at their feet, they could be the cause.

 **Ticks** can be found in grasslands and woodlands where they lie in wait for passing pets. Ticks can transmit a range of serious diseases including Lyme Disease and Babesiosis.

We have a range of very effective products to protect your pet against summer parasites. Please ask us for further information on the best treatment for your pets.

We now have **silver, cat friendly status** (isfm) and run cat only clinics on

Tuesdays and **Thursdays** at our Witham St Hughs Surgery 2.15pm to 3.15pm. Call us on **01522 869581** to book.

Microchipping is now a legal requirement in dogs over eight weeks of age. We also recommend microchipping cats and rabbits, hopefully ensuring that if they become lost or injured, a veterinary practice, the police or an animal sanctuary can scan your pet and identify you as the owner. Without a microchip, it can often be very difficult to reunite pets and their owners.

Parasites: There is a very high prevalence of roundworm infections in puppies and kittens. As they mature, they are susceptible to infection with both **roundworms** and **tapeworms** and will require regular worming treatment. Additionally, **lungworm** is posing an increasing threat for many dogs. We are also happy to advise you on **flea and ectoparasite treatment** for your pets.

Neutering: All cats should be neutered by the age of six months and certainly before you start letting them out! The situation for dogs is more complex and the timing of neutering, and whether it is required, is very dependent on your dog and situation. Our team will be very happy to discuss this with you.

Other things to consider are **diets** and **pet insurance**. We are here to help, so please don't hesitate to ask us for further information on any aspect of caring for your pets.

All Change at Park View Vets

June 2019 sees Park View appoint a new Clinical Director, as we promote our senior veterinarian, Sarah Bartlett, BVMS CertAVP MRCVS to a top post. Sarah will now be managing the day to day running of both the main Hospital site in North Hykeham and the branch surgery at Witham St Hughs alongside current Clinical director, Joanne Patrick BVSc CertSAO MRCVS.

Sarah joined Park View in 2008, many of you will know her, and indeed she will remain on consults and leading our laparoscopic spay procedures as well as general surgery. She knows the practice and all the staff and is ideal as our next senior manager. The appointment comes about as our two founding partners, David Ashcroft BVSc CertSAO MRCVS and Sue Ashcroft MA VetMB CertVD MRCVS take the initiative to 'hand over the reins' and reduce their working hours. They will now work part time with a particular emphasis on their areas of special interest and post graduate qualifications. Sue will be available for consultations, especially for dermatology cases, and David will be concentrating on lameness investigations and his role of lead orthopaedic surgeon for the practice. This change is a major one for the team but we are delighted it's an in house promotion and that David and Sue will remain with us as we go forward.

Getting off to the best start!

Welcoming a new puppy or kitten into your family is a super exciting time! To give your new family member the best start, it is important that they have their vaccinations, a microchip and are regularly treated against internal and external parasites.

Vaccinations: Both kittens and puppies need a course of vaccines to ensure they are protected against infectious diseases. Our team will be able to talk you through the exact schedule. Pets will, in addition, receive a full health check, plus we can answer any questions you may have.

More about vaccinations

As soon as you collect your puppy or kitten, we would recommend you contact us regarding their vaccination requirements. They will need a course of vaccines as a puppy/kitten and then we will advise you regarding their individual requirements thereafter (usually the next set is one year after the initial vaccination course).

Dogs are vaccinated against a range of infectious diseases: parvovirus, leptospirosis, hepatitis and distemper.

Cats are usually vaccinated against cat flu, panleukopenia, and feline leukemia virus.

Happy Birthday!

February saw us celebrate our first birthday at our branch surgery at Witham St Hughs – pupils from the local academy came by again to see us and we invited birthday clients to join in the fun too with treats and surgery tours.

Guinea Pigs are sociable, very lovable and make great pets. To keep them healthy and happy, here are a few tips:

Guinea pigs require a specialist guinea pig diet with adequate amounts of Vitamin C and free access to water. A special diet will make sure they don't develop diarrhoea or scurvy. They have continually growing teeth, so to keep their teeth healthy they need free access to hay and gnawing blocks to chew on.

Guinea pigs should never live alone, they are sociable animals and listening to the chirps they make to each other is really fun! A same sex pair or group will live together happily, but boys and girls can live together, as long as they are neutered.

Some pets may be prone to respiratory conditions or eye infections if the incorrect bedding is used. Guinea pigs are also susceptible to mite infestation and symptoms include hair loss and intense itchiness and scratching. Guinea pigs instinctively hide any signs of pain and illness, therefore it is important to check them at least once a day.

At Park View one of our registered nurses Sally is a keen guinea pig fan and always available to answer any questions and help advise on care and nutrition.

Handling the heat – a summer survival guide!

Finally, the summer is here, but it brings with it its own particular set of challenges and potential problems. Here are a few tips to keep your pet fit and well at this time of year:

Keeping cool! It is vital to ensure your pet keeps cool in hot weather. Dogs should be walked early or late in the day to avoid heat stroke. Paddling pools may help keep dogs cool and they should have free access to water at all times. Heat stroke is a common, and serious, problem and over-weight or heavily coated dogs are most at risk. Sometimes even minimal exercise can trigger it, so take care, even in the mornings and evenings. Finally, remember – dogs rapidly overheat in cars, and should never, ever, be left unattended.

Sunburn: Thinly haired or white coated pets are at risk of sunburn, especially if they are dedicated sun worshippers! White cats are particularly vulnerable to developing skin cancers on their ears and noses, so pay close attention to these areas. Problems tend to start as scabs or sores that don't heal and can progress to cancerous changes. To protect your pet, you can apply high factor sun lotion specifically designed for pets.

Grass awns are another summer problem – the grass awns of the meadow grasses are easily trapped in the coats of pets, especially dogs. They then migrate and become lodged in a variety of places including the ears and between the toes. It is always a good idea to groom your pets regularly, and especially after walks, to keep a close eye out for grass awns.

Stick to dog toys! Long walks with the dog are great, but please don't throw sticks! It is really tempting but we see some horrible head and throat injuries from them being speared. There is no reason not to play fetch, but use specific dog toys!

Insect alert! Bees and wasps are tempting to play with for both cats and dogs but will deliver a nasty sting if provoked! These are painful and can cause sudden swellings on faces or paws. Most stings will benefit from prompt veterinary attention.

Flystrike occurs when bunnies become dirty around their back-ends and flies lay eggs in the mess. These quickly hatch into flesh eating maggots, which cause horrible damage. Protect your bunnies by cleaning them out regularly, checking their back-ends twice daily and using anti-fly medications to stop any egg laying. Additionally, remember that pets in outside runs need a *shaded area* to get away from the sun.

So – enjoy the summer months, have fun and keep your pets safe. We are here to help, so if you would like any further information on summer hazards, please just ask a member of staff.

Ear tip of a cat showing cancerous changes – note the reddening of the skin. If your pet is showing signs of skin changes on their nose or ears, please call us.

Paddling pools are a great way for dogs to stay cool in the summer!

Grass awns of the summer grasses are a perennial hazard

Guinea pigs are great!

Guinea pigs can live indoors or outside, but it is important they have enough space to run and play. A run should be at least a metre square and any outside hutches need to be well insulated.

It is ideal to keep them in pairs, or small groups in a large cage, preferably with access to a grassy area. Guinea Pigs need daily cleaning to make sure they don't get sore feet or skin conditions. Make sure the cage is weatherproof and away from any predators.

Guinea pigs are grazers and will thrive with a lawn to nibble on. They should also have great quality hay available all the time and have a small amount of fresh food and guinea pig pellets every day.
